THE PRESERVER™

The Preserver™ is a retrofittable, affordable stormwater treatment system. Preservers™ are used as stand-alone BMPs, providing proven performance to meet project requirements. The Preserver™ system is also a great option for pretreatment, protecting downstream BMPs, providing an easily accessible and inexpensive maintenance point, while also reducing your site's overall maintenance costs.

The Preserver™ Energy Dissipator:

- ❖ Installed at the structure inlet(s)
- ❖ Nearly eliminates pollutant washout at high flows
- ❖ Enhances pollutant removal at low flows
- ❖ Designed and tested to work with or without a skimmer

The Preserver™ Skimmer:

- ❖ Installed at the structure outlet
- ❖ Traps floatable pollutants like trash, oil, & gas
- ❖ Enhances capture of organics like leaves, algae, seeds, & blooms
- ❖ Designed to work with or without a Dissipator

Features & Benefits:

- Retrofittable through a $\varnothing 24''$ (600mm) opening
- Adjustable to ensure proper fit and function
- Accommodates pipe diameters up to $\varnothing 48''$ (1200mm)
- Easy to install, access, inspect, and maintain

Third-Party Verification:

- Rigorous lab testing up to 16 cfs (450 L/s)
- Computational fluid dynamics up to 175 cfs (5,000 L/s)
- Extensive field monitoring including heavy debris loading, freezing conditions, and large drainage areas/flows
